

MALNEGRO DM CYGY C.

Initial Prompt:

You are creating content for a passion/advocacy page about [CAUSE/TOPIC] for [TARGET AUDIENCE].

Output a single post with exactly 4 sections. Keep total length ≤ 180 words + visual notes.

1. **Topic Overview** – Define [CAUSE/TOPIC] in 2 sentences. Use human language. Answer: “What are we fighting for?”
2. **Why It Matters** – List 3 urgent reasons it needs attention NOW. Include 1 specific stat, date, or real example tied to [LOCATION/COMMUNITY]. Frame as “what’s at stake.”
3. **Visuals** – Describe 2 scroll-stopping visuals. For each: Scene/subject | Style [photo/illustration/text-overlay] | Emotion [hope/urgency/solidarity] | On-image text ≤5 words. Must be mobile-readable, no sound needed.
4. **Call-to-Action** – 1 primary CTA starting with a verb, doable in <2 min: share, sign, comment, tag, save. Add “so that...” with the impact.

Tone: [hopeful / defiant / community-driven].

Add: 3-5 hashtags.

Avoid: shaming, misinformation, graphic imagery, partisan attacks.

Code

Quick fill example: “Coastal Cleanups in Davao”

Code

CAUSE/TOPIC: Coastal Cleanups in Davao

TARGET AUDIENCE: Davao youth ages 16-25

LOCATION/COMMUNITY: Davao City

Tone: community-driven

Code

Drop your [CAUSE/TOPIC] + [TARGET AUDIENCE] and I'll run this 1-page prompt for you.

Refinement Prompts (at least 2 more)

- Quick Engage: Add 1 comment prompt question at the very end. Must be answerable with 1-3 words. Example: “Drop a ❤️ if you agree or “Which city should we visit next?”

Accessibility: For each visual described, write 1 line of alt-text ≤125 characters. Describe the key message, not just the image. Example: “Youth holding ‘Clean Seas Now’ sign at Davao coastal cleanup.”

Final Reflection:

What worked well?

1. Structure forced completeness
The 4-section rule — Overview, Importance, Visuals, CTA — stopped the AI from giving vague inspiration quotes. Every output actually had substance + action. No fluff.
2. Constraints created quality
“≤2 sentences,” “<2 minutes,” “≤5 words on-image text,” “mobile-readable” — these tight limits made the outputs immediately usable. No extra editing to fit Instagram.
3. Role + Audience targeting
“Act as a social media manager for [CAUSE] targeting [AUDIENCE] in [LOCATION]” anchored the tone and examples. The mental health example felt Filipino, not generic global NGO-speak.
4. Visual specs were production-ready
Asking for Scene | Style | Emotion | On-image text meant you could hand that line straight to Canva or an image AI. You didn’t get “make an inspiring picture.”

What needed manual fixing?

1. Stats need fact-checking
When I say “Include 1 specific stat,” the AI will invent one if it doesn’t search. You still have to replace placeholder numbers with real, cited data from DOH, PSA, etc.
2. Tone drifts without examples
“Hopeful + community-driven” is better than nothing, but it still varies. To lock it in, you’d need to add: “Sound like: [account name]” or “Never use: [word list].”
3. CTA relevance is on you
The prompt guarantees a <2 min action, but not that the action matters. AI might say “tag a friend” when the real need is “sign the local petition.” You have to swap in the right link/ask.
4. Cultural nuance
“Youth,” “community,” “fighting for” land differently in Davao vs Manila vs US. The prompt doesn’t auto-localize idioms or taboos. You still sense-check for your audience.

What did you learn about prompting?

1. Specificity > Intensity
“MAKE THIS MORE BETTER” got weak edits. “Add volumetric smoke, rim

lighting, 8K detail” got strong edits. The model responds to technical nouns, not ALL CAPS.

2. Format before content

Telling the AI *how* to structure the answer — “Use exactly 4 sections” — was more important than describing the cause. Structure first, then fill it.

3. Constraints are creative direction

“≤180 words,” “≤5 words on image,” “<2 minutes” aren’t limitations. They’re guardrails that force clarity and stop rambling.

4. Layer your asks

One line for Overview, 3 bullets for Importance, 2 specs for Visuals, 1 verb for CTA. Breaking the request into micro-tasks gave deeper results than one big paragraph prompt.

5. Prompts are templates, not magic

The best prompt still needs your human judgment for facts, tone, and the actual ask. AI drafts 80%. You supply the 20% that makes it true, local, and effective.
